

Picot, G., Deribere-Desgardes, M. L., and
Levery, F.
AN EXPERIMENT IN THE AUTOMATIC SELECTION
OF DOCUMENTATION, [1-2] 10p.
Order from SLA \$1.10

62-16755

Partial trans. (p. 8-11) of *Revue de la Documentation* (Netherlands) 1962, v. 29, no. 1, p. 8-13.

DESCRIPTORS: *Documentation, *Information re-
trieval, Digital computers, Data storage systems,
Experimental data, Chemistry

A mechanical retrieval system (similar to the system used by ASTIA) was tested on a collection of 10,000 documents relating to organic chemistry. An IBM 705 machine was used. The average number of key-words (or descriptors) was about 8 per document. A total of some 12,316 key-words were applied to the collection. After the documents were analyzed (i.e., the key-words were extracted), the documents were sorted into 100 categories. The results were then used to select a sample of 100 documents from each category. This sample was then used to test the system's ability to retrieve specific documents. The results showed that the system was able to retrieve most of the desired documents with a high degree of accuracy. The system was also able to handle large amounts of data and to perform complex retrievals. The results of this experiment suggest that such systems could be useful for retrieving information from large collections of documents.

DESCRIPTORS: *Operations research, *Scheduling,
Sequences, Matrix algebra.

Sequencing problems are concerned with working of
several products over a series of machines, where the
working times of these products differ from one
machine to another. The problem is to find an optimal
sequence of the products minimizing the total elapsed
time. Under certain restrictions the problem is re-
duced to solving the travelling salesman problem. The
method is illustrated by a simple example. (Author)
